

Food borne Illness Project!

1. Which food borne illness are you? (circle one)

Staphylococcus

Norovirus

Campylobacter

Botulism

Listeriosis (Listeria)

Clostridium perfringens

E. coli

Salmonella

2. Research information about your food borne illness to fill out the back side of this sheet.

*Please use the following resource: <http://www.cdc.gov/foodsafety/diseases/index.html>

3. Use this information to write a short story from the point of view of your food borne illness.

Be sure to name it and everything! In the story, explain:

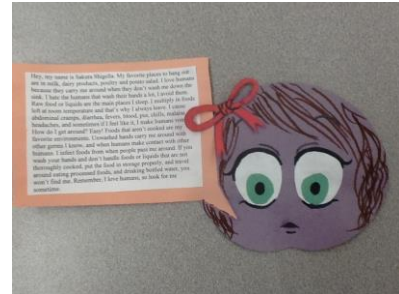

- * where it is found/how a person gets it
- * what the symptoms are/how it makes people sick
- * ways people can prevent getting this foodborne illness.

Attach the short story to your creation of this microorganism.

4. For additional information you may use the following websites to research your foodborne illness:

<http://www.fightbac.org/food-poisoning/foodborne-pathogens/>

5. You will be presenting your project to the class!

Evaluation for Food Borne Illness Project. Your project will be graded on the following:

_____ **Worksheet Completion:** This worksheet is complete & turned in with project.

_____ **Bacteria Creation:** Story was attached to your creative and visually interesting version of what your bacteria could look like (does NOT need to be accurate – can be as creative as you would like).

_____ **Story Content:** Information in your story is correct, complete and useful and is 6-8 complete sentences.

_____ **Neatness:** Project looks clean and organized. Story is typed (size 14+)

_____ **Story Creativity:** Story was written from the point of view of your bacteria.

_____ **Spelling/Grammar:** Spelling and grammar are correct.
